

# CARBONSUITE & BESTBATH CASE STUDY

Sustainability, embedded into core business and integrated into core systems.

*"Embarking on our sustainability journey, we sought a solution to efficiently track emissions, which led us to CarbonSuite. Instead of opting for a separate system, we seamlessly integrated it with our ERP system, streamlining our processes. Thanks to this innovative approach, we not only met but also exceeded project deadlines. The responsive customer support further solidified our experience, ensuring a smooth and productive implementation."*

**- Bob Cook, Engineering Manager**

## OBJECTIVES

In recent years, Bestbath has embarked on their sustainability journey, with executive-backed plans to become a carbon neutral company. In addition to deploying renewable energy solutions at their facilities, Bestbath was looking for a solution to track their progress on carbon emissions that integrated with their existing systems and processes.

## SOLUTIONS

CarbonSuite was implemented for Bestbath in a fraction of the time that was originally scoped for the project. Using CarbonSuite "turbocharged" Bestbath's carbon accounting process (according to their leadership team). The CarbonSuite SuiteApp was deployed, configured, and implemented in just a few weeks - calculating Scope 1, 2, and 3 emissions for Bestbath.

### **Built for NetSuite**

*As a long-time user of NetSuite, Bestbath prioritized keeping their carbon accounting process in NetSuite. Bestbath team members were already familiar with NetSuite, and the ramp up time was cut down significantly.*

### **Cost and Time Savings**

*Using CarbonSuite's automated solution, Bestbath was able to save significant time AND cost on their carbon accounting implementation.*

### **No More Spreadsheets**

*Having a centralized system for carbon accounting has allowed Bestbath to automate their processes and consolidate their reporting within their financial system.*
