

ESG Global & CarbonSuite

A global energy solutions provider simplifying carbon reporting with integrated software and expert support.

“Being able to track, manage and reduce our carbon footprint is a critical part of ESG's sustainability initiatives and more broadly, the transition to a cleaner, smarter energy landscape. Working with CarbonSuite has allowed us to implement a streamlined emissions tracking and reporting solution that is tightly integrated into our business processes, and their Managed Service offering allows us to leverage the expertise of CarbonSuite team to help us succeed in understanding and reducing our carbon footprint. Throughout the project the CarbonSuite team were knowledgeable, attentive and well-structured, ensuring the project stayed on track and aligned with our objectives. The team took the time to fully understand our specific requirements, and work with us to implement the solution we needed.”

Kate Barnes

Global Product Director for Market Products at ESG & CSR Strategy Lead

OBJECTIVE

ESG Global needed a reliable way to measure and report its greenhouse gas emissions across all scopes. With increasing pressure from stakeholders and reporting requirements, they sought a solution that could streamline the process. The company wanted to ensure data accuracy while minimizing the internal time commitment required to meet annual disclosure timelines. A key requirement was integrating emissions tracking into existing finance and operations systems without adding complexity.

SOLUTION

CarbonSuite was implemented to support ESG Global’s annual emissions reporting across Scopes 1, 2, and 3. ESG Global uses our Carbon Accounting-as-a-Service offering, combining software with expert advisory to fully manage their yearly reporting. We also helped integrate Concur Expense and NetSuite to automate business travel emissions tracking with detailed, auditable records. This allowed ESG Global to centralize its emissions data and reporting workflows inside its existing financial system.

BENEFITS

Built Within NetSuite

CarbonSuite runs natively within ESG Global’s NetSuite environment, eliminating the need for separate platforms or data migrations. This made it easy for the finance team to access emissions data alongside financials and vendor records. All emissions calculations are traceable and tied to transactional data already in NetSuite.

Streamlined for Finance Teams

Because CarbonSuite is built for non-technical users, ESG Global’s finance team can manage and review reports without involving IT or external consultants. Dashboards and reports are easy to interpret and align with audit-ready standards. The platform also supports customized workflows that match ESG Global’s internal review and sign-off process.

Full-Service Support with Carbon Accounting-as-a-Service

By combining CarbonSuite with expert support, ESG Global receives a turnkey solution for emissions reporting each year. Our team handles data collection automation, methodology updates, and reporting prep, freeing internal teams to focus on business priorities. This model ensures ESG Global stays compliant and aligned with evolving standards, without adding internal workload.
